

1 · HIDDEN WORLD

Hidden CPT world

fixed before the model acts

one exact CPT row

$P(v_j | v_{pa(j)})$

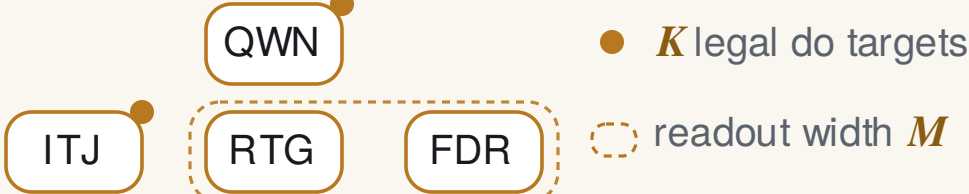

3/8	1/4	3/8
-----	-----	-----

Same legal laws force the same accepted answer.

2 · EXPERIMENT SURFACE

Controlled surface

seals the mechanism, meters the evidence

Access varies; the causal truth does not.

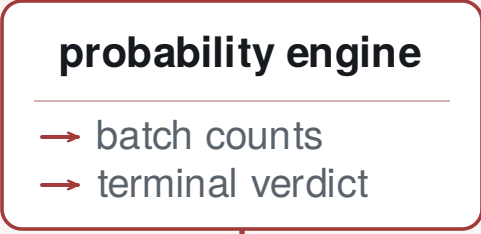

4 · ONE SEMANTICS

DoLens semantic engine

one CPT law and verdict; counts are sampled

five terminal objects

- total effect
- counterfactual transition
- experimental decision
- minimal adjustment sets
- mediator structure

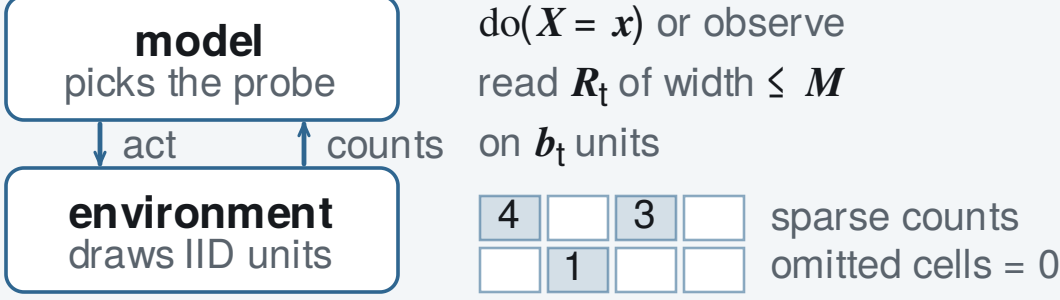

Feedback and verdict share one semantics.

3 · ACTIVE EPISODE

Probe, then read

the model chooses each experiment

Only the requested joint counts return.

5 · COUNTERFACTUAL OUTER CHECK

Endpoint marginals give a universal outer interval for the task truth.

$P(Y_0 = 1) = 0.2$ $P(Y_1 = 1) = 0.8$

- + monotonicity: subset {0.6}
- one compatible SCM: one point
